What Changes Over Time

Across implementation sites:

- Up to 90% reduction in aggressive behaviors
- Up to 80% reduction in disciplinary actions
- Increased attendance, engagement, and performance
- Improved staff confidence and consistency
- Reduced system strain and burnout
- Improved staff well-being and retention

SCBF increases the effectiveness of existing programs by improving consistency and reducing system friction.

Sustained stress impacts performance and well-being

As regulation and consistency improve:

- Decision-making becomes more stable
- Communication becomes more effective

Strengthen Your System

Grounded in neuroscience.
Designed for real-world application.

Who We Partner With:

- Schools And Districts
- Law Enforcement and Justice Systems
- Behavioral Health Organizations
- Community and Workforce Environments

What Partnership Looks Like:

- ✔ Apply the model in real time
- ✔ Equip leadership and staff with practical tools
- ✔ Establish measurable, system-level outcomes
- ✔ Improve staff well-being and consistency
- ✔ Build a scalable and sustainable approach

SCBF strengthens how your system functions so that outcomes improve and teams are better supported over time.

Environments shape outcomes.
We strengthen environments.

Stronger systems support both outcomes and the people responsible for them.

Strengthening Systems from Within

Systems are not broken. They are under pressure. SCBF helps them function more effectively.

What Systems Are Navigating

Most systems are not strained due to lack of effort or commitment. They are operating under sustained pressure.

- Increasing complexity of needs
- Fragmented initiatives and competing priorities
- Constant demand for performance and outcomes
- Limited time for alignment, reflection, and recovery

Teams are working hard, but often find themselves:

- Reacting instead of stabilizing
- Managing crises instead of preventing them
- Implementing multiple initiatives without full alignment
- Working harder without seeing consistent results

Vicarious trauma and ongoing exposure to stress are real and often underrecognized.

Over time, this impacts:

- Decision-making
- Communication
- Consistency of response
- Overall system effectiveness

How Behavior Develops

All behavior follows a predictable neurological sequence:

Most systems respond after behavior occurs.

SCBF STRENGTHENS SYSTEMS EARLIER, AT THE LEVEL OF NERVOUS SYSTEM ACTIVATION, WHERE OUTCOMES CAN STILL CHANGE.

KEY PRINCIPLES

Protection precedes Learning

Regulation precedes Correction

Connection precedes Compliance

A Partnership, Not a Program

SCBF strengthens how your system functions under pressure. It does not replace what you already have. It strengthens and aligns what is already in place.

How SCBF Is Implemented

SCBF operates as an integrated system across environments, designed for real-time application and long-term sustainability.

CORE COMPONENTS

- **SYSTEM ALIGNMENT**
  Establishes shared understanding and consistent response across leadership and staff.
- **REAL-TIME APPLICATION**
  Equips teams with practical tools they can use immediately, in the moments that matter most.
- **NEURAL INTEGRATION**
  Supports regulation and processing through structured, neuroscience-based methods, including expressive integration strategies.
- **SUSTAINED PARTNERSHIP**
  Provides ongoing support, reinforcement, and system-wide alignment over time.

SUPPORT LAYER

- LMS access with micro-learnings
- Proprietary AI-supported decision tools
- Year-round partnership and implementation support

The challenge is not commitment. It is capacity under sustained pressure.

When systems reduce internal pressure, performance becomes more consistent.

This is not an add-on. It is a system-level shift that strengthens everything already in place.
